

Our threaded bumpers have a tough, solid core surrounded by a rubber exterior that withstands impact. They are often used to guard, align, and position parts on automated machinery. Plus they're threaded so they're easy to install and remove. Male thread bumpers and male thread hex shoulder bumpers have a rigid stud made of steel for fastening into any surface. Medium-soft bumpers are about as hard as a pencil eraser. Hard bumpers are about as hard as a shoe heel. Polyurethane bumpers are abrasion resistant and non-staining. For indoor and outdoor use. Temperature range is -65 degree to +200 degree F, unless noted Color is red.

Round Urethane bumpers with male and female threaded fasteners molded in a variety of sizes and durometers.
