

High Performance URETHANE COIL-STORAGE BLOCKS are designed to prevent damage to coils

Coil Storage Cradles

- Made of molded 95A duro orange Urethane, these blocks are resilient to prevent damage to coil contact surfaces, and are stronger & more durable than rubber or plastic.
- Ideal for Automotive exposed metal coils, pre-painted, polished or decorative sheet metals such as aluminum, copper, brass and stainless steel.
- Designed to fit in standard steel channels to provide maximum flexibility and safety. Positioned inside, C-channels, with requisite spacings for the size of coils, storage space and operating efficiency can be optimized.
- Engineered for coil diameters of 48" to 72" dia. Three models are offered for different load-capacity, enabling coils to be double-stacked.
